

RenaissanceRe has a long-standing dedication to sustainability and protecting the environment, balancing environmental considerations and social responsibility with our overall business goals. We are a leader in researching and modeling atmospheric hazards and the economic impact of catastrophic storms. RenaissanceRe believes in following environmentally responsible business practices. We look for effective ways to reduce our impact on the environment, monitoring and analyzing our operations and facilities to help us determine how we can be more efficient and environmentally friendly.

Some of the steps we take include:

- Regularly reviewing our equipment and technology, and appropriately installing more efficient versions.
- Conducting operations in compliance with applicable environmental laws and regulations.
- Identifying and implementing measures to reduce waste and conserve natural resources.
- Conducting assessments with utility providers and vendors to better understand and consider our environmental impact.
- Building awareness among our stakeholders, including employees, about the impact of climate change and steps that we can take to protect the environment and build resilience in our communities.

Please refer to our [Sustainability Report](#), [Code of Vendor Conduct](#) and other relevant disclosures for more information on RenaissanceRe's approach to sustainability.
